

DECORATOR DATABASE CABINETRY

ENTERTAINMENT CENTERS

Average furniture stores display departments full of entertainment centers these days. But, using built-in cabinetry by a quality custom or semi-custom cabinet manufacturer is a far smarter way to house your video and audio equipment.

- Rather than a one-size-fits-all solution, request a design that exactly fits your modules.
- Plan storage for tapes, CD's and DVD's.
- Choose a unique combination of style and finish that complements your other furniture, even your custom fireplace surround (also created from cabinetry components).
- Add excitement to your entertainment center with art glass or punched tin door inserts.
- Personalize the design with classic moldings, furniture feet or other enhancements.
- Create an entertainment center for the bedroom, too. Armoire styling can complement existing furniture or match a completely new beautiful bedroom.

As with other uses of built-in cabinetry throughout your home, the advantages in quality and selection for your personal entertainment center are unmatched by ordinary furniture.

Consider an exciting new entertainment center for your great room that reflects or complements the cabinetry in your new kitchen. Your **Floor To Ceiling®** design specialist will show you how you can use cabinetry throughout your home!
